2.11	Содержимое index.php	12
2.12	Исправление настроек доступа	13
2.13	Отображение сайта	13
2.14	Сохранение конфигурации	14
2.15	http.sh	15

Список таблиц

1 Цель работы

Приобретение практических навыков по расширенному конфигурированию HTTP-сервера Apache в части безопасности и возможности использования PHP.

2 Выполнение лабораторной работы

Для начала запустим наш сервер через vagrant (рис. 2.1).

```
C:\work\nsandyryushin\vagrant>vagrant up server
Bringing machine 'server' up with 'virtualbox' provider...
==> server: You assigned a static IP ending in ".1" or ":1" to this machine.
==> server: This is very often used by the router and can cause the
==> server: network to not work properly. If the network doesn't work
==> server: properly, try changing this IP.
==> server: You assigned a static IP ending in ".1" or ":1" to this machine.
==> server: This is very often used by the router and can cause the
==> server: network to not work properly. If the network doesn't work
==> server: properly, try changing this IP.
==> server: Clearing any previously set forwarded ports...
==> server: Clearing any previously set network interfaces...
==> server: Preparing network interfaces based on configuration...
    server: Adapter 1: nat
    server: Adapter 2: intnet
==> server: Forwarding ports...
    server: 22 (guest) => 2222 (host) (adapter 1)
==> server: Running 'pre-boot' VM customizations...
==> server: Booting VM...
==> server: Waiting for machine to boot. This may take a few minutes...
    server: SSH address: 127.0.0.1:2222
    server: SSH username: vagrant
    server: SSH auth method: password
==> server: Machine booted and ready!
[server] GuestAdditions 7.1.4 running --- OK.
==> server: Checking for guest additions in VM...
==> server: Setting hostname...
==> server: Configuring and enabling network interfaces...
==> server: Mounting shared folders...
    server: C:/work/nsandyryushin/vagrant => /vagrant
==> server: Machine already provisioned. Run `vagrant provision` or use the `--provision`
==> server: flag to force provisioning. Provisioners marked to run always will still run.
==> server: Running provisioner: common hostname (shell)...
    server: Running: C:/Users/mega_/AppData/Local/Temp/vagrant-shell120251004-14476-fxwvc5.sh
```

Рис. 2.1: Запуск сервера

Далее нам необходимо создать сертификат. Создадим его в созданной нами папке /etc/pki/tls/private, который сделаем симлинком на папку /etc/ssl/private. После создания сертификата, скопируем его в /etc/ssl/certs (рис. 2.2).

```

GNU nano 8.1                               www.nsandryushin.net.conf
<VirtualHost *:80>
    ServerAdmin webmaster@nsandryushin.net
    DocumentRoot /var/www/html/www.nsandryushin.net
    ServerName www.nsandryushin.net
    ServerAlias www.nsandryushin.net
    ErrorLog logs/www.nsandryushin.net-error_log
    CustomLog logs/www.nsandryushin.net-access_log common
    RewriteEngine on
    RewriteRule ^(.*)$ https://%{HTTP_HOST}$1 [R=301,L]
</VirtualHost>

<IfModule mod_ssl.c>
<VirtualHost *:443>
    SSLEngine on
    ServerAdmin webmaster@nsandryushin.net
    DocumentRoot /var/www/html/www.nsandryushin.net
    ServerName www.nsandryushin.net
    ServerAlias www.nsandryushin.net
    ErrorLog logs/www.nsandryushin.net-error_log
    CustomLog logs/www.nsandryushin.net-access_log common
    SSLCertificateFile /etc/ssl/certs/www.nsandryushin.net.crt
    SSLCertificateKeyFile /etc/ssl/private/www.nsandryushin.net.key
</VirtualHost>
</IfModule>

```

Рис. 2.4: www.nsandryushin.net.conf

Теперь с помощью фаервола разрешим работу с https и пеезапустим службу httpd (рис. 2.5).

```

Рис. 2.5: Настройка фаервола

Теперь перейдём на машину клиента. Попробуем войти на наш сайт www.nsandryushin.net и увидим, что браузер предупреждает о том, что соединение незащищено. Тем не менее, подтверждаем переход на сайт (рис. 2.6).

Рис. 2.6: Предупреждение

Как видим, соединение к сайту происходит по https (рис. 2.7).

Рис. 2.7: Подключение к сайту

Посмотрим на сертификат, и увидим, что там те же данные, что мы вводили при создании (рис. 2.8).

Рис. 2.8: Сертификат

Установим на сервере пакет php (рис. 2.9).

```
[root@server.nsandryushin.net conf.d]# dnf -y install php
Last metadata expiration check: 0:10:57 ago on Sat 04 Oct 2025 04:52:42 PM UTC.
Dependencies resolved.

Transaction Summary
=====
Install 10 Packages
```

Рис. 2.9: Установка php

Создадим на замену старого index.html файл index.php в папке /var/www/html/www.nsandryushin.net (рис. 2.10).

```
[root@server.nsandryushin.net conf.d]# touch /var/www/html/www.nsandryushin.net/index.php
[root@server.nsandryushin.net conf.d]# nano /var/www/html/www.nsandryushin.net/index.php
[root@server.nsandryushin.net conf.d]# rm /var/www/html/www.nsandryushin.net/index.html
rm: remove regular file '/var/www/html/www.nsandryushin.net/index.html'? y
[root@server.nsandryushin.net conf.d]#
```

Рис. 2.10: Замена файла index.html на index.php

В index.php запишем следующее (рис. 2.11).

```
GNU nano 8.1 /var/www/html/www.nsandryushin.net/index.php
<?php
phpinfo();
?>
```

Рис. 2.11: Содержимое index.php

Теперь восстановим метки selinux и поменяем владельца нашей папки /var/www на apache, после чего перезапустим службу (рис. 2.12).

```
[root@server.nsandryushin.net conf.d]# chown -R apache:apache /var/www
[root@server.nsandryushin.net conf.d]# restorecon -vR /etc
Relabeled /etc/NetworkManager/system-connections/eth1.nmconnection from unconfined_u:objec
t_r:user_tmp_t:s0 to unconfined_u:object_r:NetworkManager_etc_rw_t:s0
[root@server.nsandryushin.net conf.d]# restorecon -vR /var/www
[root@server.nsandryushin.net conf.d]# systemctl restart httpd
[root@server.nsandryushin.net conf.d]#
```

Рис. 2.12: Исправление настроек доступа

Теперь посмотрим, как на машине клиента отображается наш сайт (рис. 2.13).

Рис. 2.13: Отображение сайта

Теперь сохраним нашу конфигурацию для vagrant (рис. 2.14).

```
[root@server.nsandryushin.net conf.d]# cd /vagrant/provision/server/http
[root@server.nsandryushin.net http]# cp -R /etc/httpd/conf.d/* /vagrant/provision/server/http/etc/httpd/conf.d
cp: overwrite '/vagrant/provision/server/http/etc/httpd/conf.d/autoindex.conf'? y
cp: overwrite '/vagrant/provision/server/http/etc/httpd/conf.d/fcgid.conf'? y
cp: overwrite '/vagrant/provision/server/http/etc/httpd/conf.d/manual.conf'? y
cp: overwrite '/vagrant/provision/server/http/etc/httpd/conf.d/README'? y
cp: overwrite '/vagrant/provision/server/http/etc/httpd/conf.d/server.nsandryushin.net.conf'? y
cp: overwrite '/vagrant/provision/server/http/etc/httpd/conf.d/ssl.conf'? y
cp: overwrite '/vagrant/provision/server/http/etc/httpd/conf.d/userdir.conf'? y
cp: overwrite '/vagrant/provision/server/http/etc/httpd/conf.d/welcome.conf'? y
cp: overwrite '/vagrant/provision/server/http/etc/httpd/conf.d/www.nsandryushin.net.conf'? y
[root@server.nsandryushin.net http]# cp -R /var/www/html/* /vagrant/provision/server/http/var/www/html
cp: overwrite '/vagrant/provision/server/http/var/www/html/server.nsandryushin.net/index.html'? y
[root@server.nsandryushin.net http]# mkdir -p /vagrant/provision/server/http/etc/pki/tls/private
[root@server.nsandryushin.net http]# mkdir -p /vagrant/provision/server/http/etc/pki/tls/certs
[root@server.nsandryushin.net http]# cp -R /etc/pki/tls/private/www.nsandryushin.net.key /vagrant/provision/server/http/etc/pki/tls/private
[root@server.nsandryushin.net http]# cp -R /etc/pki/tls/certs/www.nsandryushin.net.crt /vagrant/provision/server/http/etc/pki/tls/certs
```

Рис. 2.14: Сохранение конфигурации

И модифицируем наш файл `/vagrant/provision/server/http.sh` таким образом, что он будем устанавливать пакет `php` и настраивать `firewall` для работы с `https` (рис. 2.15).

```
GNU nano 8.1 /vagrant/provision/server/http.sh
#!/bin/bash
echo "Provisioning script $0"
echo "Install needed packages"
dnf -y groupinstall "Basic Web Server"
echo "Copy configuration files"
cp -R /vagrant/provision/server/http/etc/httpd/* /etc/httpd
cp -R /vagrant/provision/server/http/var/www/* /var/www
chown -R apache:apache /var/www
restorecon -vR /etc
restorecon -vR /var/www
echo "Configure firewall"
firewall-cmd --add-service=http
firewall-cmd --add-service=http --permanent
echo "Start http service"
systemctl enable httpd
systemctl start httpd

echo "install php"
dnf -y install php
echo "configure firewall for https"
firewall-cmd --list-services
firewall-cmd --get-services
firewall-cmd --add-service=https
firewall-cmd --add-service=https --permanent
firewall-cmd --reload
echo "restart httpd"
systemctl restart httpd
```

Рис. 2.15: http.sh

3 Выводы

В результате выполнения лабораторной работы были получены навыки по конфигурированию HTTP-сервера Apache и https
